Objet: AISTATS 2017: Reviewing starts
Date: 28 octobre 2016 à 06:51
À: romain.tavenard@irisa.fr

Dear Romain Tavenard,

Paper reviewing has started.

1. Please go over reviewer instructions at <http://www.aistats.org/reviewer.html>
2. Please log into the CMT website at: <https://cmt.research.microsoft.com/AISTATS2017/> to review your assigned papers.

Reviews are due by: Wednesday Nov 23 5pm Pacific Time. This deadline is strict, as we cannot delay an already tight schedule. Please let us know *immediately* if there is any reason you cannot review the assigned papers.

AISTATS does not give the option to revise and resubmit: if a paper cannot be accepted with very minor revisions (i.e., if you do not believe the authors will / can fix a serious issue in camera-ready), it should be rejected.

You will be able to request code and accompanying data to help your review as part of the author feedback process. If you would like to raise a request, please state in the review what code/data you'd like to see, and choose Yes for the "Code/Data Requested" box in the review form. The SPC member in charge of the paper will decide whether they support your request. In the event your request is supported by the SPC member, we will transfer the code and data to you at the end of the author feedback period. Please consult the review instructions on legitimate grounds for code/data requests. Note this request is NOT to be used to ask the authors to release their code after the paper has been published.

You may notice that some papers are previously submitted to NIPS 2016. You will not be able to see the old NIPS reviews for those papers at this point. However, those authors may have included a revision letter as part of the supplementary materials. You need not take into consideration the revision letter in your review yet.

Finally, we would like to signal to newcomers to AISTATS (and to machine-learning conferences generally) that the review process is envisioned in exactly the same spirit as in a top quality journal. Accepted contributions are published in proceedings, and acceptance is competitive, so authors can rightly include these contributions in their publication list, on par with papers published in top quality journals. Meanwhile, AISTATS is a highly competitive conference with limited presentation space, thus not every paper, sometimes even good ones, can be accepted. In recent years, the acceptance rate of AISTATS has been around 30%.

Best,
Aarti and Jerry
